

# HOLISTIC FEEDING

**>a baby sleep-training mobile and monitoring unit**

This tree stand offers bedtime routine for the baby via a collapsing mobile (two way memory alloy) as well as monitoring the baby. The stand is also the nesting and charging station for the bottle cooler/warmer.

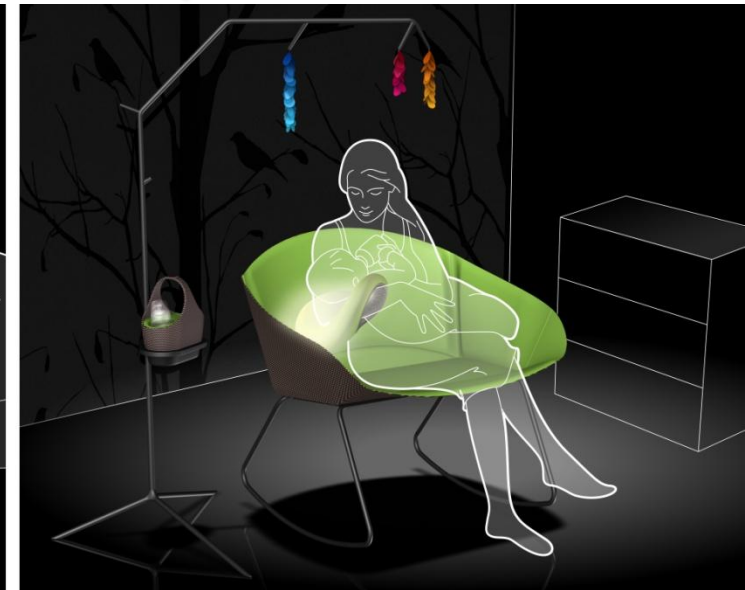

L'ARBRE

**>a transformable baby bassinet/ rocker**

This bassinet easily unfolds to become a cozy feeding rocker. An auto-rocker integrated in the base soothes baby to sleep between feedings and becomes part of baby's bedtime routine.

LE NID

LE PANIER

**>a bottle cooling/warming unit**

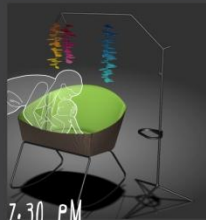

This portable basket keeps two prepared milk bottles cool (using thermoelectrics technology) while recharging on the tree stand. If the baby cries within the feeding timeframe set by the parents, a bottle will instantly be warmed up.

LE COUSSIN

**>a parent lighting/monitoring unit soft as a light pillow.**

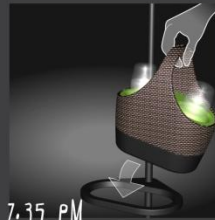

This pillow lamp also acts as the "heart" of the system allowing parents to set up waking "turns" and bottle warming timeframe. As the baby cry, the electroluminescent fabric pillow softly lights up and the baby's sound gradually follows to wake up the parent. "Le Coussin" then becomes a soft portable nightlight and a supporting feeding pillow.

# SCENARIO

7:30 PM

BABY goes to sleep. The monitoring mobile is open and visually active.

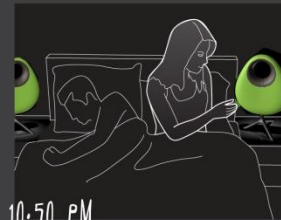

7:35 PM

MOM prepares the night bottles and nests the cooler/warmer on the tree.

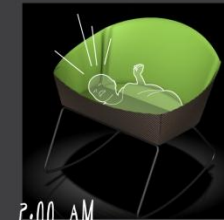

7:40 PM

MOM starts the auto-rocker and as the night darkens, the mobile collapses into sleep mode.

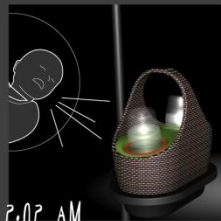

10:50 PM

MOM sets the waking preferences on the parent monitoring unit and goes to sleep.

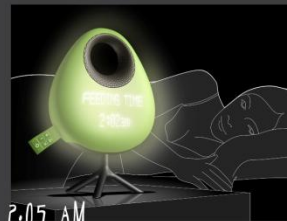

2:00 AM

3 hours later, and within feeding time, BABY wakes-up ...

2:02 AM

... and his cries instantly activate the bottle warmer.

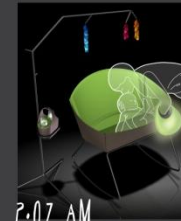

2:05 AM

MOM's monitoring pillow lamp gradually transmits BABY's cries and softly wakes her up.

2:06 AM

MOM gets up without disrupting DADDY, as it will be his feeding duty later.

2:07 AM

The pillow lamp provides soft and reassuring light as MOM picks up BABY or changes him.

2:09 AM

MOM unfolds the bassinet into a feeding rocker with one hand.

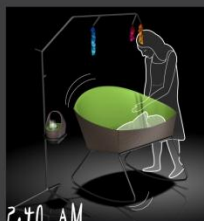

2:10 AM

She picks the warmed bottle from the cooler/warmer basket.

2:12 AM

MOM can sit and feed BABY comfortably with the lit pillow lamp as support.

2:40 AM

To help lull BABY to sleep, she starts the auto-rocker.

2:42 AM

MOM walks back to her room with the lit pillow lamp guiding her.

2:45 AM

She nests the pillow lamp back on its stand and goes to sleep while the light naturally dims down...

ZZZZZZZZ.....  
until the next feeding.
